Climate Change, Resilient Infrastructure, and Sustainable Development – Use of Recycled Asphalt in Mauritius

The attention of potential bidders for road construction projects is drawn to the fact that as part of its policy on climate change, resilient infrastructure, and sustainable development, the RDA envisages to introduce the use of recycled asphalt in road maintenance works.

In this regard, the potential bidders are hereby informed that they need to accustom themselves with the techniques of recycling asphalt and avail themselves of this opportunity to use recycled asphalt in the context of the future framework agreement for road maintenance and minor works, which will be effective as from January 2021.

DISCLAIMER:

The RDA reserves the right not to proceed with using recycled asphalt in road maintenance works without thereby incurring any liability to any potential bidder.
