2.0 Upgrading of Ebene Fly-Over (Design-Build/ Turnkey)

**Project Objectives**

- Improve traffic flow along M1 motorway.
- Decrease in travel time and congestion for incoming traffic in Ebene region.

**Project Description**

With the rapid development within the central part of the island, namely at Ebene, Reduit and Highlands and the expected increase in development at Ebene, there is a need to cater for additional traffic in these areas. Moreover, due to the traffic congestion during the peak hours, it is proposed to widen the existing fly-over along M1 Ebene.

The Project will consist of the following:

- To widen the existing fly-over along M1 at Ebene to reduce traffic congestion and alleviate traffic volume at the fly-over.
- Demolition of the existing roundabout along Ebene-Trianon Link Road to be replaced with a signalised intersection.
- Construction of full clover leaf.
- Realignment of slip lanes.

**Project Value**

The cost estimate for this project is Rs 265 M.

**Project Status**

It is expected that the project will start in May 2020. The duration of this project is 18 months.
